Thefirst tool in the suite was PsList, a tool that lets you view detailedinformation about processes, and the suite is continually growing.. None of the PsTools contain viruses, but they have been used by viruses, which is why they trigger virus notifications.. Over time, I've grown a collection of similar tools, including some notincluded in the Resource Kits.. RKTools (Rocket Tools for Model 204) is a set of application subsystems (aka APSYs) running inside a Model 204 Online that provide TN3270 and web-based tools for programmers, database administrators, and system managers.. What sets these tools apart is that theyall allow you to manage remote systems as well as the local one.. Some anti-virus scanners report that one or more of the tools are infected with a 'remote admin' virus. e10c415e6f
